# Supercharge Kubeflow Performance on GPU Clusters

*Meenakshi Kaushik (Cisco)  
Neelima Mukiri (Cisco)*

# Agenda

- Overview
- Introduction to KubeFlow
- Distributed Training
- Hyperparameter Tuning
- Infrastructure and OS Optimization
- Summary

# What is the Opportunity?

KubeCon

CloudNativeCon

North America 2019

# Kubeflow

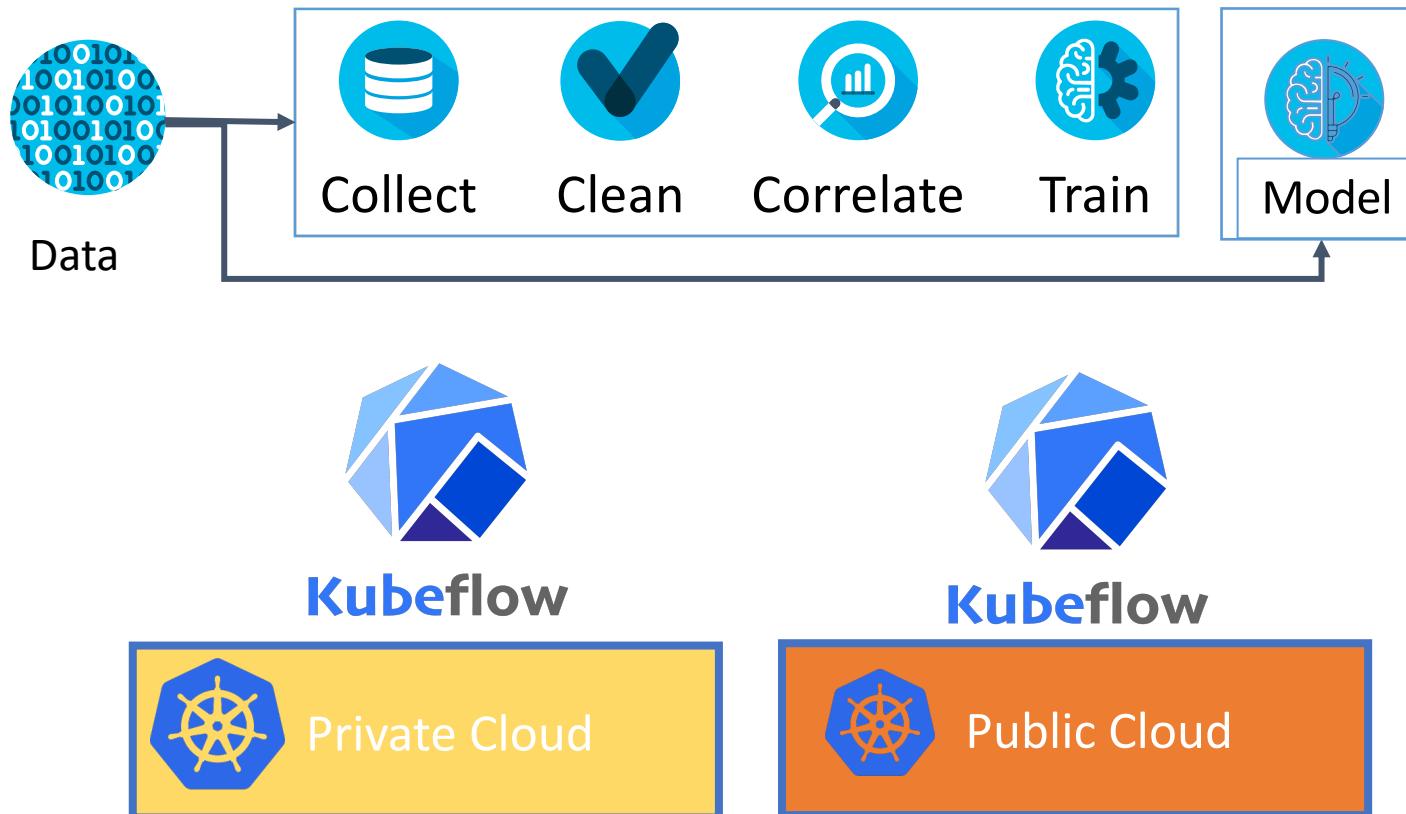

KubeCon

CloudNativeCon

North America 2019

*Machine learning lifecycle manager that makes it easy to develop, deploy and manage portable, scalable end-to-end ML workflows everywhere*

# Kubeflow

KubeCon

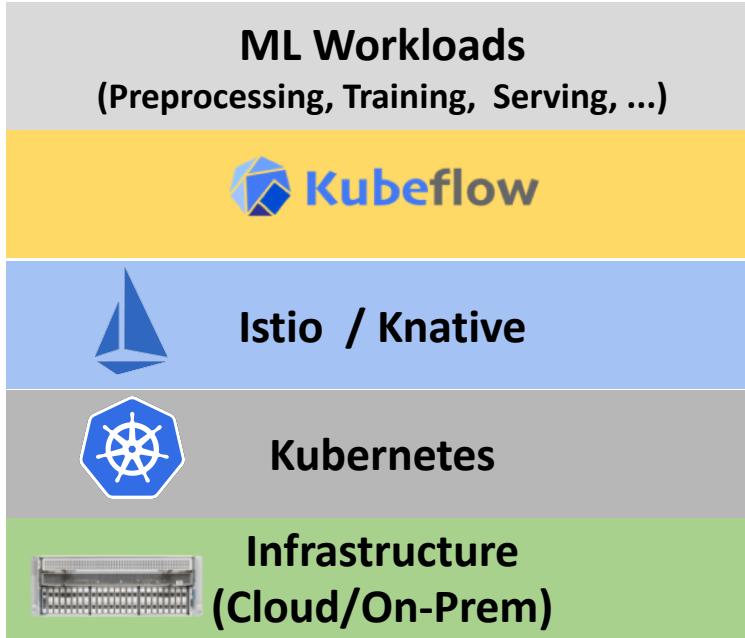

CloudNativeCon

North America 2019

## Kubeflow

- **Data exploration** using Jupyter notebooks
- **Model training** using different machine learning frameworks such as TensorFlow, PyTorch, Spark, XGBoost, MPIJob, ...
- **Model serving** KFServing, TFServing, Seldon, ...
- **Hyperparameter tuning and NAS** via Katib
- **Pipelines**

KubeCon

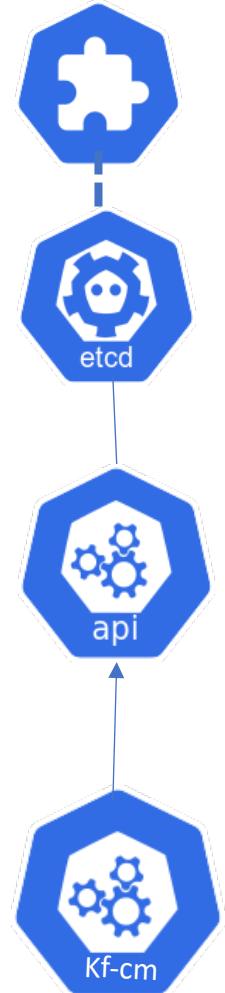

CloudNativeCon

North America 2019

# Kubeflow Operators

[kubeflow.org/v1alpha2](https://kubeflow.org/v1alpha2)

## Pre-processing

- Spark
- ..

## Training

- MPIJob
- TFJob
- XGBoost
- PyTorchJob
- ...

## Hyperparameter Tuning

- Suggestion
- Experiment
- Trials
- ...

## Model Serving

- Inference Services
- Configurations
- Revisions
- Routes
- ..

# Kubernetes GPU Configuration

# Intra-Node GPU Topology

- NVLink- High speed GPU interconnect, each lane is 25GB/s
- NVLink 2.0 has 6 lanes with overall 300GB/s bandwidth between 8x SXM2 V100-32GB Nvidia GPU
- 4x PCI switch for connectivity between CPU/GPU and network card
- 4 x16 PCI slot for VIC or 3<sup>rd</sup> party NICs
- Based on standard Nvidia NVLink 2.0 spec
